

College of Computing and Information Sciences

John Kennidy Abunda
III – BINS

Certification Description:

I have completed official training for the ISC2 Certified in Cybersecurity (CC) course, which is a comprehensive training program that helps you develop foundational knowledge of global digital asset protection skills. Through this course, you will develop a solid understanding of the five main domains of information security: Security Principles, Incident Response or Business Continuity, Access Control, Network Security, and Security Operations. Through simulated scenarios, you will learn to identify an organizations risk, Apply the ISC2 Code of Ethics relevant to the scenario, and Understand the key elements of a Network Fire Wall rule and data life cycle. In addition, you will learn how to defend the CIA triad (Confidentiality, Integrity, and Availability) in the IT environment.

To obtain this new certification I went through a certification process in which I had to demonstrate the ability to identify Administrative, Physical, and Technical Controls as well as understanding disaster recovery and incident detection. Through studying for this new certification I learned about Mandatory and Role-Based Access Controls, how cryptographic hashing is used to guarantee data integrity, and many other aspects of Computer Security including in-depth understanding of various network protocols and how to monitor a network for security breaches. So not only did I become more knowledgeable about security I also became more security aware, focused on both Human Safety and System Security, with the mindset that security always comes first. With this new skill set I am now able to be a productive member of a security team and face the many challenges that come with security in our ever-advancing connected world.

Total Training Hours: 50 Hours
